**Objectives.** There are two general objectives for this course:

- Learn how to index for the purpose of storing information
- Because you understand more thoroughly the indexing process, become more proficient in retrieving information

Specific aims of the course:

1. Use different types of indexes - to see their variations and uses
2. Create your own indexes
3. Use thesauri and understand methods of thesaurus construction
4. Evaluate indexes - the strengths and shortcomings
5. Compare traditional indexing techniques with automatic indexing and natural language processing
6. Evaluate computer assisted indexing, indexing software, embedded indexing, and Web indexing
7. Through your greater familiarity with indexing techniques and vocabulary control, improve the quality of your searching and information retrieval

## Readings for the course
